Grows on miniature plants rarely exceeding a height of 3½ feet and can be sown in rows, thinning the plants out to 9 inches apart, allowing 24 inches between the rows. Each plant carries 3 to 5 ears about 4 inches long. For a continuous supply, successive sowings should be made every 10 days until July 10th in the latitude of New York.

Mason's Golden Midget Sweet Corn,

Maturing in 56 days, should be planted whether your garden is measured in square feet or acres.

This is the very best Corn for deep freezing as it does not lose its delicious flavor or tenderness.

We have received testimonials from customers all over the United States, Canada and Mexico, commending us on the quality and all-around goodness of this introduction.

Kennedy Kwality Vegetable Seeds

Prize-Winning Basket of Vegetables Grown From Kennedy Kwality Seed.

New strains and improvements over old favorites are continually introduced after thorough trials in the field. Our U. S. Department of Agriculture appropriates tremendous sums to breed in desired characteristics, or to develop something new. We are always on the alert to procure these items after

careful trials. To continue to offer the old favorites results in a duplication and sometimes confusion for the gardener. As quantities are produced, and the price is in line, we therefore drop the older variety in any instance where the new introduction embodies all older features plus additional assets.

ASPARAGUS ROOTS

Fr., *Asperge*; Ger., *Spargel*; Sp., *Esparrago*; It., *Asparagi*

Asparagus roots should be planted in trenches, which should be prepared at least 2 feet deep and 1 foot wide, or 3 rows may be planted in a bed 5 feet wide. The excavated soil should be placed on each side of the trench; then put in a layer of barnyard manure 4 inches deep in the bottom of the trench; if manure is not available, use other matter rich in organic material. With a spading fork work this manure into the subsoil, then fill back the excavated soil to within 6 inches of the garden grade and your trench is now ready to receive the crowns which should be placed a foot apart and covered with about 2 inches of soil after the roots have been carefully spread out. Do not cut any Asparagus the first year as the plant has to build up a good root system and strong crowns before it can really produce. In the late fall, following planting, clear off all tops. The following spring the excess soil on the side of the trench can be filled in and the bed is complete. If the bed is given an annual dressing of a complete fertilizer, cultivated and kept free from weeds, it will give an abundance of Asparagus for many years.

Kennedy Kwality Lawn Grass Seed

For Permanent Lawns of Putting Green Texture

HOW TO MAKE A LAWN

The ground should be thoroughly prepared; that is, the soil should be fertilized, then turned over to a depth of 6 inches and pulverized. Sow good seed (which is very essential) roll the ground and cross roll in order to press the seed firmly into the soil. The proper time to sow grass seed depends upon the latitude. In the central and eastern states seed may be sown from March 1st to the end of June. Seed may be sown in the fall, from the first part of August to the end of October. Sow, if possible, when the ground is moist. For seeding a new lawn use 150 pounds to the acre.

KENNEDY'S BENTURF

REG. U.S. PAT. OFF.

Lawn Grass Seed Mixture (Bent Formula)

The popularity of golf in recent years has made comparison of lawns and putting greens an easy matter. One hardly expects his lawn to look as perfect as a putting green, but this is possible if sown with Kennedy's Benturf Lawn Grass Seed Mixture. With reasonable preparation and care excellent results have been accomplished with our Kennedy's Benturf Lawn Grass Seed Mixture which contains a large amount of Bent seed. This makes a compact, rapid growth, forming a close sward withstanding wear and tear.

The seed in this mixture is all re-cleaned and especially adapted to withstand the heat and drought of the summer. When properly sown and cared for GREENTURF will produce a beautiful green lawn the entire season.

The only variety suitable for lawns. Very dwarf and of a spreading habit. We advise sowing White Clover separately on account of the seed being much heavier than that of the finer grass seed. The plants should be strong enough by December to go through the winter with only a few inches of leaves or hay for protection. Remove the covering about the end of March. Seed may be sown outdoors early in April in well-fertilized soil.

Kennedy's Long-Stemmed Imperial Giants

The Pansy has been a garden favorite since the middle of the 17th century. In recent years, hybridizers have developed the size of flower and length of stem to such an extent as to make descriptions inadequate. To convey a true picture of the infinite perfection of form, range of color, texture of petals, and length of stem, produced by our mixture of Long-Stemmed Imperial Giants is impossible. Several years ago we offered Kennedy's Long-Stemmed Imperial Giants in mixture only. With their free-flowering habit and wide range of sombrous shades of soft velvet, we do not hesitate to proclaim Kennedy's Long-Stemmed Imperial Giants, the finest Pansies in cultivation today.

We now offer this same strain in fixed name varieties, in addition to the mixture. Because the best flowers are shy seeders, the price of a good strain is necessarily high.

POPPIES H. A.—H. P.

The development of the Poppy has brought them into great and deserved popularity, and it may be safely said that no other flower affords a more imposing display of brilliant coloring. A sandy loam is best for growing Poppies and as they are difficult to transplant, it is well to sow the seed where the plants are to bloom.

Single Annual Varieties

According to a recent ruling of the Federal Narcotics Department it is illegal to grow plants from which opiates may be extracted. These plants include the various strains of Poppies, Carnation Flowered, Peony Flowered, Cardinal and Tall Single Annual, therefore in adherence to this law we will not offer the above types of Poppy seed for sale.

POMPON DAHLIAS

Kennedy Kwality Exhibition Gladiolus

Until the war years we revised and improved our list of Gladiolus each year to include the best variety in its color class regardless of price. Subsequently, the price was reduced as quantities were available. Some varieties, as Picardy, never entirely lost their positions as leaders for years.

With labor available and flower shows scheduled again, we have resumed our policy to add, eliminate, and generally revise our list annually.

We suggest that you select a few of the newer ones. Watch and compare them in your own garden, and know them next year at reduced prices.

Due, no doubt, to scientific treatment of planting stock for years our Gladioli have always been free from thrip. As an added precaution and to be sure that bulbs supplied by us are absolutely free from this pest, we will also scientifically treat our bulbs again before shipment is made to our customers.

Inasmuch as thrip lives in the soil, as well as on the bulbs in storage, through the winter, it is imperative that our bulbs be planted on soil where Gladioli were not grown last year and not close to other Gladioli from other sources.

We guarantee our bulbs to be the largest size and well matured, which is absolutely essential for producing exhibition flowers.

Kennedy Quality Hardy Everblooming Roses

Extra Heavy, Hardy Northern Nursery-Grown Stock

The Roses offered in this list are of the Hybrid Tea class, which are commonly known as Everblooming Roses, and are without exception the most desirable for bedding. The stock we offer is extra heavy, northern nursery-grown, which, if planted in the early spring, are guaranteed to bloom from June until frost, and are not to be confused with the stock which has been forced in greenhouses all winter and after being discarded by growers because of weakened condition due to hard forcing, is offered for sale as flowering stock by unscrupulous dealers.

Budded plants are more vigorous, produce more and better flowers, are more hardy and less susceptible to disease.

Because of the very great shortage of good Rose stock available this year we will only be able to supply the varieties as listed on these pages and due to this shortage some of these varieties will be sold out very early. We would appreciate, if you would state, when placing your order, that we may substitute an equally good variety in the same color.

IMP

The Best Fertilizer for the Grower

Owing to the war, the importation of fertilizers from England was stopped. The manufacturer of IMP, after canvassing competing formulas, found one that was apparently beyond criticism and that one was "Clay's", a fertilizer manufactured in England and used there by the growers almost to the exclusion of other mixed fertilizers.

As the manufacturers of IMP imported large quantities of "Clay's" fertilizer for years and were familiar with the high regard in which it was held by their trade, they made a complete analysis of the composition and the method of its manufacture. They found the formula could be duplicated and placed IMP on the market in January, 1940. At the present time there are hundreds of leading commercial growers using IMP.
